GROWING ENGINEERING COMPANY WATERLINE RELOCATES

You would think the ongoing COVID-19 restrictions would hinder growth opportunities for businesses in this ever-evolving environment. However, that's exactly what Brisbane-based engineering company Waterline has done.

During COVID, Waterline has managed to double in size, as its clients have seen the real value these operational engineering experts can provide to their business, prompting the need for larger premises to house a growing team.

"When the first COVID lockdown hit, we found ourselves supporting our clients remotely. With more than 90% of our clients in the mining industry, we needed to find a way to keep our clients' sites productive and running safely. Because we're site-experienced, we were able to support our clients without the need to be on site. This proved beneficial for our clients as this meant we could keep their projects moving and at the same time, deliver savings, as on site work usually means there's uplift in travel costs," said Tim Strong, Operations Manager.

"We support all mining operations in Queensland, so we have a deep understanding of what it takes to keep mine sites compliant, operational and safe. Our clients see us as an extension to their team and with Waterline, they have access to all our multi-discipline engineers under one roof. That's why they turn to Waterline and that's why we've needed to grow, ensuring we can support our clients' projects," Mr Strong said.

Waterline relocates to Level 2, 133 Mary St Brisbane Qld, on 26 September 2021. From their new premises, they will continue to support their existing and new clients, keeping their mining sites running 24/7 safely and efficiently, now and into the future.
